PORTKEY
Food Delivery System

Project Report

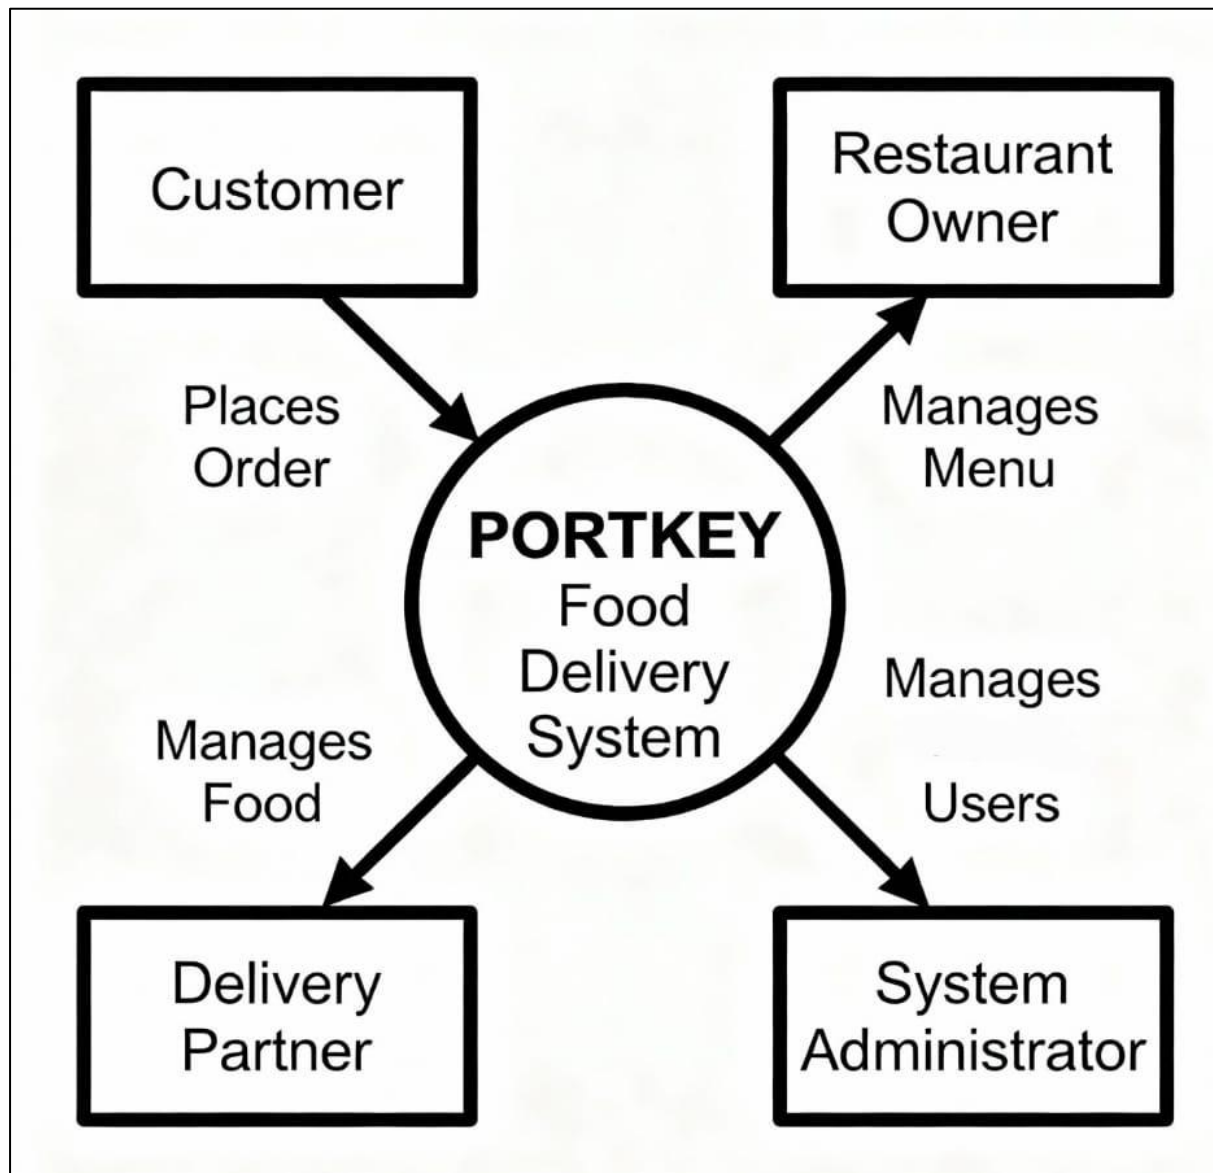

Submitted By:

Princita Zina Miranda (C-17)

Rithik Ramesh (C-11)

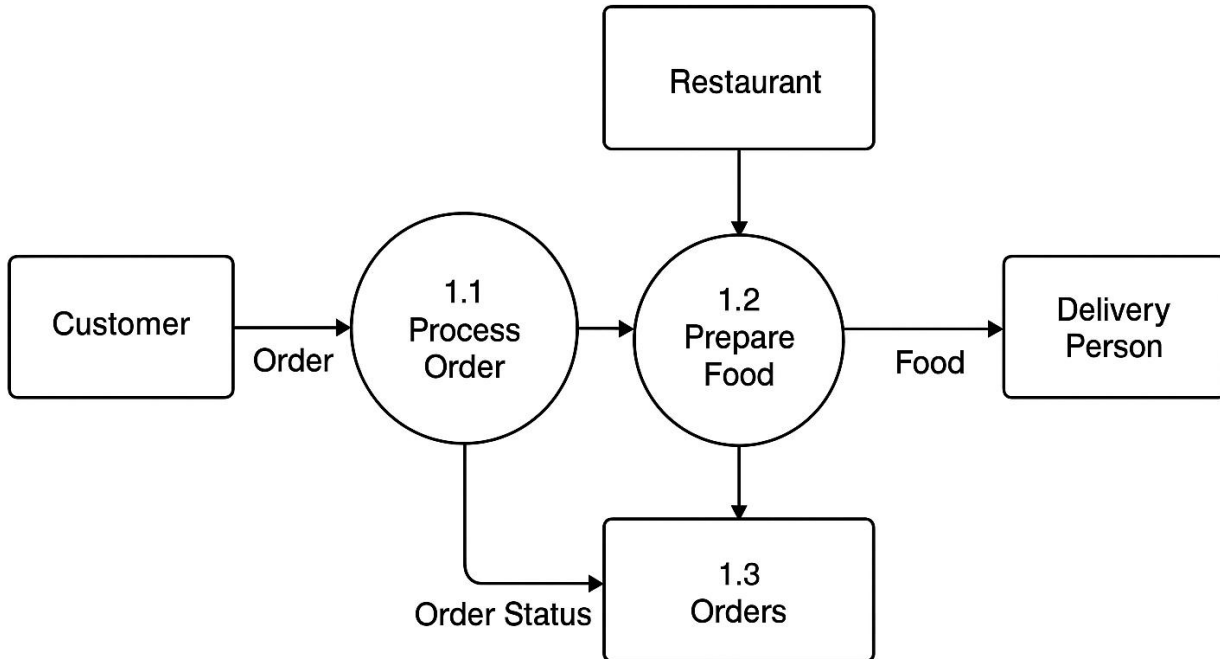

Abhay Nair (C-28)

1. Draw a context diagram (level 0 DFD) of your project by identifying the major external entities and the primary interactions with the system.

2. Create a DFD level 1 and DFD level 2 and clearly show the main processes, data stores and data flows involved.

DFD Level 1

3. Write the Data Dictionary

User

Description: Customer/Admin user of the system

Attributes:

UserID = string (Primary Key)

Name = string

Email = string

Password = string (encrypted)

Phone = string

Address = string

Role = string {Customer, Admin}

Restaurant

Description: Food establishment providing services

Attributes:

RestaurantID = string (Primary Key)

Name = string

Address = string

Contact = string

OperatingHours = string

CuisineType = string

MenuItem

Description: Food items available for ordering

Attributes:

ItemID = string (Primary Key)

RestaurantID = string (Foreign Key)

Name = string

Description = string

Price = decimal

Category = string

Availability = boolean

Order

Description: Customer food order

Attributes:

OrderID = string (Primary Key)

UserID = string (Foreign Key)

RestaurantID = string (Foreign Key)

TotalAmount = decimal

Status = string {placed, preparing, dispatched, delivered}

Timestamp = datetime

DeliveryAddress = string

OrderItem

Description: Individual items within an order

Attributes:

OrderItemID = string (Primary Key)

OrderID = string (Foreign Key)

ItemID = string (Foreign Key)

Quantity = integer

DeliveryPartner

Description: Person delivering the order

Attributes:

PartnerID = string (Primary Key)

Name = string

Phone = string

Status = string {available, busy}

CurrentOrders = integer

Cart

Description: Temporary storage for items before order placement

Attributes:

CartID = string (Primary Key)

UserID = string (Foreign Key)

Items = array of objects

TotalAmount = decimal

Payment

Description: Payment transaction details

Attributes:

PaymentID = string (Primary Key)

OrderID = string (Foreign Key)

PaymentMethod = string {COD, Online}

Amount = decimal

Status = string {pending, completed, failed}

TransactionID = string

ChatBot

Description: ML-powered customer support system

Attributes:

SessionID = string (Primary Key)

UserID = string (Foreign Key)

Query = string

Response = string

Timestamp = datetime

4. Draw the corresponding Structured chart.
